Subject Index to Volume 12

A

Acinar cells, pancreatic, novel kinase signaling cascades, 117
Adenosine triphosphate (ATP)-sensitive K^+ channels
  and coronary vasodilation, independence from nitric oxide (Trendsetters), 246
  cardiac, role during anoxia and ischemia, 78
  defects, and pathogenesis of PHHI, 197
  metabolic sensor, 255
Adrenergic nerve endings, transmitter release, total exocytosis or fractional release, 32
Aging process, menopause (Trendsetters), 143
Amiloride-sensitive Na^+ channels, biophysical and molecular characteristics, 55
Analgesia, opioid, modulation by cholecystokinin receptors, 263
Angiogenesis, regulation, influence of prolactins, 231
Anoikis (Trendsetters), 96
Anoxia, role of cardiac K_{ATP} channels, 78
Antidiuretic hormone signal peptide and neurophysin II gene mutations, cause of central diabetes insipidus, 67
Antifreeze proteins, from fish, protection of cellular membranes during lipid-phase transitions, 189
Antisense oligonucleotides, design and delivery, 99
Apoptosis, regulation (Trendsetters), 96
Aqueous humor, transport by ciliary epithelium of eye, 158
Arginine vasopressin (AVP), AVP-neurophysin II gene mutations, hereditary central diabetes insipidus, 67
β-Arrestins, and GRKs, pleiotropic role in receptor regulation, 145
ATP. *see* Adenosine triphosphate
AVP. *see* Arginine vasopressin

B

β-Cells, human, ion-channel dysfunction, pathogenesis of PHHI, 197
Biophysics, 100-m sprint, 131
Birds, high-altitude, reduction in oxygen consumption, 121
Blood
  clotting, coagulation factor XI (Trendsetters), 95
  proteins, developing brain, exclusion by intercellular junctions, 21
Blood-brain barrier, developing brain, 21
Brain
  cerebral cortex, function, rodent whisker barrels, 268
  circulation, prostanoids as intrinsic modulators, 72
  developing, barriers, 21
  disease, caused by mutations in genes encoding voltage-gated ion channels, 105
  posterior parietal cortex, humans and monkeys, 166
  signals from circulating pyrogens, 1
  split, visuospatial attention, 226
Breathing, and locomotion, mechanical links, 273

C

Calcium
  channels, and mitogens, 279
  intracellular Ca^{2+}, mediation of muscle plasticity, new model (Trendsetters), 194
  metabolism, myocardial, 35-year perspective (Historical Perspectives), 238
Callosotomy patients, visuospatial attention, 226
Cardiomyocytes, designer cultures, impulse propagation, 171
Cardiovascular system, effect of endothelin, 113
Cell death, MAPK cascades, 286
Cell division, eukaryotic DNA replication fork, 125
Cell growth, MAPK cascades, 286
Cell membrane concept, contribution of Ernest Overton, centennial appreciation (Historical Perspectives), 49
Cell suicide, regulation (Trendsetters), 96
Cellular energy demands, changing, adaptation of mitochondrial gene expression, 178
Central nervous system, age-related changes (Trendsetters), 143
Cerebrospinal fluid, protein concentration, developing brain, 21
Cholecystokinin, receptors, modulation of opioid analgesia, 263
Chromatin, eukaryotic DNA replication fork, 125
Ciliary epithelium, of eye, transport by, 158
Circulation, cerebral, modulation by prostanoids, 72
Coagulation factor XI (Trendsetters), 95
Colonic crypts, ion transport, regulation, 62
Computer simulation, predicting limits of human running performance, 131
Connective tissues, physiology, control of interstitial fluid pressure, role of integrins, 42
Crustaceans, neurosecretory cells, regulatory influences, 16
Crypt cells, colonic, ion transport, regulation, 62

D

Delayed rectifier K^+ channels, role in cardiac repolarization and arrhythmias, 152
Diabetes insipidus
  central, hereditary, signal peptide and neurophysin II gene mutations, 67
  hereditary, molecular analysis (Trendsetters), 296
Disease, human, and quality control of protein folding, 162
DNA, replication fork, eukaryotic, 125

E

Embryos, bird, high-altitude, oxygen transport system, 121
Endocytosis, of polypeptides, rabbit nasal respiratory mucosa, 219
Endoplasmic reticulum, protein folding, quality control, 162
Endothelial cells, leukocyte-endothelial adhesion, role in ischemia-reperfusion injury (Trendsetters), 142
Endothelin
  cardiovascular effects, 113
  role in kidney disease, 83
Energy, conservation, law of (Historical Perspectives), 90
Enteric neuroimmune system (Trendsetters), 245
Eukaryotic DNA replication fork, 125
Eye
  ciliary epithelium, transport of aqueous humor, 158
  invention of ophthalmoscope (Historical Perspectives), 90
Eyestalk, crustacean, neurosecretory cells, regulatory influences, 16

F

Fetus, blood-brain barrier, 21
Fever, circulating pyrogens, signals to brain, 1
Fish antifreeze glycoproteins, protection of cellular membranes during lipid-phase transitions, 189
Focal adhesion kinase (FAK), inhibition of anoikis (Trendsetters), 96

G

$GABA_C$ receptors, pharmacology, 136
Gastrin processing, link to gastrointestinal physiology, 9
Gene expression, mitochondrial, adaptation to changing cellular energy demands, 178
Gene mutations
  signal peptide and neurophysin II, hereditary central diabetes insipidus, 67

0886-1714/97 $5.00 © 1997 Int. Union Physiol. Sci./Am. Physiol. Soc.

Eukaryotic DNA replication fork, 125
Eye
  ciliary epithelium, transport of aqueous humor, 158
  invention of ophthalmoscope (Historical Perspectives), 90
Eyestalk, crustacean, neurosecretory cells, regulatory influences, 16

F

Fetus, blood-brain barrier, 21
Fever, circulating pyrogens, signals to brain, 1
Fish antifreeze glycoproteins, protection of cellular membranes during lipid-phase transitions, 189
Focal adhesion kinase (FAK), inhibition of anoikis (Trendsetters), 96

G

$GABA_C$ receptors, pharmacology, 136
Gastrin processing, link to gastrointestinal physiology, 9
Gene expression, mitochondrial, adaptation to changing cellular energy demands, 178
Gene mutations
  signal peptide and neurophysin II, hereditary central diabetes insipidus, 67

0886-1714/97 $5.00 © 1997 Int. Union Physiol. Sci./Am. Physiol. Soc.

voltage-gated ion channels, channelopathies, 105
Glycoproteins, antifreeze, from fish, protection of cellular membranes during lipid-phase transitions, 189
G protein-coupled receptor kinases (GRKs), and β-arrestins, pleiotropic role in receptor regulation, 145
GRKs. *see* G protein-coupled receptor kinases

H

Heart
arrhythmias, role of delayed rectifier K^+ channels, 152
calcium metabolism, 35-year perspective (Historical Perspectives), 238
cardiomyocytes, designer cultures, impulse propagation, 171
disease, caused by mutations in genes encoding voltage-gated ion channels, 105
K_{ATP} channels
and vasodilation, independence from nitric oxide (Trendsetters), 246
role during anoxia and ischemia, 78
myocardial injury, during acute reperfusion, mechanism (Trendsetters), 53
repolarization, role of delayed rectifier K^+ channels, 152
Helmholtz, Hermann von (Historical Perspectives), 90
HIF-1. *see* Hypoxia-inducible transcription factor
Hormones
antidiuretic hormone signal peptide and neurophysin II gene mutations, cause of central diabetes insipidus, 67
insulin, hypersecretion, pathogenesis of PHHI, 197
Hypophosphatemia, renal phosphate excretion, 211
Hypoxia, molecular response, mediators, HIF-1, 214
Hypoxia-inducible transcription factor (HIF-1), 214
Hypoxic environment, oxygen transport system of high-altitude bird embryos, 121

I

Impulse propagation, designer cultures of cardiomyocytes, 171
Insulin, hypersecretion, pathogenesis of PHHI, 197
Integrins, and control of interstitial fluid pressure, 42
Interstitial fluid pressure, control, role of integrins, 42
Intestine
enteric neuroimmune system (Trendsetters), 245
iron absorption, cellular mechanism and regulation, 184
Ion channels
voltage-dependent activation, physical mechanism, 203
voltage-gated, channelopathies, 105
voltage sensor, 203
Ion transport, regulation in colonic crypts, 62
Iron, intestinal absorption, cellular mechanism and regulation, 184
Ischemia, role of cardiac K_{ATP} channels, 78
Ischemia-reperfusion injury, role of leukocyte-endothelial adhesion (Trendsetters), 142

K

K_{ATP} channels. *see* Potassium channels, ATP-sensitive
Kidney
disease
caused by mutations in genes encoding voltage-gated ion channels, 105
role of endothelin, 83
phosphate excretion, regulation, new concepts concerning, 211
Kinase signaling cascades, novel, in pancreatic acinar cells, 117

L

Leukocytes, leukocyte-endothelial adhesion, role in ischemia-reperfusion injury (Trendsetters), 142
Locomotion, and breathing, mechanical links, 273

M

MAPK. *see* Mitogen-activated protein kinase
Menopause, and aging process (Trendsetters), 143
Metabolic sensor, K_{ATP} channels, 255
Mitochondrial gene expression, adaptation to changing cellular energy demands, 178
Mitogen-activated protein kinase (MAPK), cascades, in cell growth and death, 286
Mitogens, and calcium channels, 279
Motor control, role of mammalian muscle spindle, 37
Muscle, skeletal, disease caused by mutations in genes encoding voltage-gated ion channels, 105
Muscle contraction, motions of myosin heads, 249
Muscle plasticity, mediation by Ca^{2+}, new model (Trendsetters), 194
Muscle spindle, mammalian, 37
Myocardial injury, during acute reperfusion, mechanism (Trendsetters), 53
Myosin, heads, motions that drive muscle contraction, 249

N

Na^+ channels, *see* Sodium channels
NaCl. *see* Sodium chloride
Nasal respiratory mucosa, endocytosis of polypeptides, rabbits, 219
Nerve endings, adrenergic, transmitter release, total exocytosis or fractional release, 32
Neurophysin II, gene mutations, hereditary central diabetes insipidus, 67
Neurosecretory cells, crustacean, regulatory influences, 16
Nitric oxide, coronary vasodilation and K_{ATP} channels (Trendsetters), 246

O

Oligonucleotides, antisense, design and delivery, 99
Ophthalmoscope, invention (Historical Perspectives), 90
Opioids, analgesia, modulation by cholecystokinin type A and type B receptors, 263
Osteomalacia, renal phosphate excretion, 211
Overton, Ernest, contribution to cell membrane concept, centennial appreciation (Historical Perspectives), 49
Oxygen
anoxia, role of cardiac K_{ATP} channels, 78
hypoxia, molecular response, mediators, HIF-1, 214
transport system, high-altitude bird embryos, 121

P

Pancreatic acinar cells, novel kinase signaling cascades, 117
Parietal cortex, posterior, humans and monkeys, 166
Peptides
antidiuretic hormone signal peptide and neurophysin II gene mutations, cause of central diabetes insipidus, 67
posttranslational processing, review, gastrin as model, 9
Persistent hyperinsulinemic hypoglycemia of infancy (PHHI), pathogenesis, 197
Pharmacology, unusual, $GABA_C$ receptors, 136
PHHI. *see* Persistent hyperinsulinemic hypoglycemia of infancy
Phosphate, renal excretion, new concepts concerning regulation, 211
Phosphorus, metabolism, regulation in mammals, review, 211
Physiology
application of antisense technology, 99
connective tissues, control of interstitial fluid pressure, role of integrins, 42
future of (News From IUPS), 294
gastrointestinal, link with gastrin processing, 9
100-m sprint, 131
Pleiotropy, role of G proteins, GRKs, and β-arrestins in receptor regulation, 145
Polypeptides, endocytosis, in rabbit nasal respiratory mucosa, 219
Posterior parietal cortex, humans and monkeys, 166
Potassium channels
ATP-sensitive (K_{ATP} channels)
cardiac, role during anoxia and ischemia, 78
coronary vasodilation, independence from nitric oxide (Trendsetters), 246
defects, and pathogenesis of PHHI, 197
metabolic sensor, 255
delayed rectifier, role in cardiac repolarization and arrhythmias, 152
voltage-dependent activation, physical mechanism, 203
Prolactins, regulation of angiogenesis, 231
Proprioception, role of mammalian muscle spindle, 37
Prostaglandin E_2, as pyrogenic mediator, 1
Prostanoids, modulation of cerebral circulation, 72

0886-1714/97 $5.00 © 1997 Int. Union Physiol. Sci./Am. Physiol. Soc.

Protein folding, quality control, participation in human disease, 162
Proteins
  fish antifreeze glycoproteins, protection of cellular membranes during lipid-phase transitions, 189
  G proteins, GRKs, and β-arrestins, pleiotropic role in receptor regulation, 145
  specific, gene expression, inhibition by antisense oligonucleotides, 99
Pyrogens, circulating, signals to brain, 1

R

Receptor regulation, pleiotropic role for GRKs and β-arrestins, 145
Receptors
  cholecystokinin, modulation of opioid analgesia, 263
  $GABA_C$, pharmacology, 136
Reperfusion, acute
  ischemia-reperfusion injury, role of leukocyte-endothelial adhesion, (Trendsetters), 142
  mechanism of myocardial injury (Trendsetters), 53
Running, 100-m sprint, physiology and biophysics, 131

S

Salt. see Sodium chloride
Signals, pyrogenic, transmission to brain, role of peripheral vagal afferents, 1
Sodium channels, amiloride-sensitive, insights and outlooks, 55
Sodium chloride, transport, regulation in colonic crypts, 62
Somatosensory cortex, function, rodent whisker barrels, 268
Split brain, visuospatial attention, 226
Sprinting, 100-m sprint, physiology and biophysics, 131
Stroke victims, effects of posterior parietal lesions, 166

T

Thermodynamics, first law (Historical Perspectives), 90
Transmitter release, adrenergic nerve endings, total exocytosis or fractional release, 32

V

Vagal afferents, subdiaphragmatic, transmission of pyrogenic signals to brain, 1
Vasodilation, coronary, and K_{ATP} channels, independence from nitric oxide (Trendsetters), 246
Visuospatial attention, split brain, 226
Voltage-dependent activation, ion channels, physical mechanism, 203
Voltage-gated ion channels, channelopathies, 105
Voltage sensor, ion channels, 203

W

Whisker barrels, rodent, and cerebral cortical function, 268
